

Classification Of The Animal Kingdom

Explore the interesting classification of the animal kingdom.

Animals may be classified into Fish, Mammals, and Birds.

FISH live in water. They have gills that help them breathe, and also have fins and scales. Examples of fish are Whale, Shark, Dolphin, Salmon, Rohu.

MAMMALS are warm-blooded animals. They often possess hair in their body/skin. Interestingly, mammals produce milk to nurture and feed their young ones. Examples of mammals are Cows, Human beings, Kangaroos, Bats, Dogs.

BIRDS are also warm-blooded animals. They possess wings that help them fly. Unlike fish or mammals, the body of almost all birds is covered with feathers. Examples of birds are Peacock, Sparrow, Parrot, Mynah, Cuckoo.

Write the names of the animals in their respective columns.
