

Find The Answers

Solve the following subtraction problems using the number line.

Number line:

- On the given scale, mark the first number of the equation.
- From the marked number, go backward (on the left side)
- You should go back as many times as per the value of the second number.

We will give you a small example and then go on to the questions:

Example $6 - 4 = \underline{\quad}$?

When we go 4 steps backward from 6, we reach 2. So the answer here is **2**.

Solve the following equations according to the explanation provided:

$9 - 1 =$

$9 - 6 =$

$8 - 3 =$

$8 - 5 =$

$6 - 4 =$

$9 - 2 =$

$7 - 6 =$

$7 - 3 =$

$5 - 1 =$

$6 - 1 =$

$3 - 2 =$

$5 - 2 =$

$4 - 1 =$

$8 - 4 =$

$2 - 1 =$
