

Different Parts Of A Human Brain

Based on the information you have read and the colorful images of the brain you have seen, check how much you remember about the brain by solving these questions.

Tick the correct answer from the given options:

1. The nerve cells

- Transmit information
- Control the right side of the body
- Control the left side of the body
- Transfer information between the two hemispheres

2. The long structures that are spread like a complex network of wires

- Nerve cells
- Corpus callosum
- Thalamus
- Hypothalamus

3. Each hemisphere has these many lobes

- 3
- 4
- 5
- 6

4. The thick bundle of fibers that connect the two hemispheres

- Corpus callosum
- Cerebrum
- Cerebellum
- Nerve fibers

5. The wrinkled outer layer of the brain

- Cerebral cortex
- Cerebrum
- Cerebellum
- Hypothalamus

6. Role of cerebrum

- Balancing the body Moving around, thinking, speaking, learning
- Hearing Emotional control

7. Which lobe is responsible for thinking, planning, voluntary actions, speech production, and emotional control?

- Frontal lobe Parietal lobe
- Temporal lobe Occipital lobe

8. Which lobe is responsible for hearing, memory, feelings, sound recognition, object recognition, etc.?

- Frontal lobe Parietal lobe
- Temporal lobe Occipital lobe

9. Which lobe helps in visual observation and perception of shapes, colors, movement, and light?

- Frontal lobe Parietal lobe
- Temporal lobe Occipital lobe

10. Which lobe allows us to feel heat, pain, and touch?

- Frontal lobe Parietal lobe
- Temporal lobe Occipital lobe

11. Which part of the brain helps in transferring information from the cerebral cortex to the body parts?

- Thalamus Hypothalamus
- Cerebrum Corpus callosum

12. Which part of the brain helps in maintaining body temperature, sleep, thirst, and hunger?

- Thalamus Hypothalamus
- Cerebrum Corpus callosum
