

Find The Missing Place Value To Form A 4-Digit Number

Fill the appropriate number in the blanks so that the sum is equal to the 4-digit number given. We have done the first one for your reference.

$$1000 + \underline{\hspace{2cm}} + 70 + 8 = 1578$$

$$1000 + 200 + \underline{\hspace{2cm}} + 4 = 1224$$

$$4 + 100 + \underline{\hspace{2cm}} + 3000 = 3114$$

$$20 + 100 + 0 + \underline{\hspace{2cm}} = 2120$$

$$1 + 50 + \underline{\hspace{2cm}} + 0 = 1052$$

$$6 + \underline{\hspace{2cm}} + 300 + 1000 = 1336$$

$$90 + 600 + 0 + \underline{\hspace{2cm}} = 1690$$

$$5 + 30 + 0 + \underline{\hspace{2cm}} = 5035$$

$$2000 + \underline{\hspace{2cm}} + 60 + 0 = 2260$$

$$2 + 30 + \underline{\hspace{2cm}} + 6000 = 6739$$

$$5 + 40 + 100 + \underline{\hspace{2cm}} = 2145$$

$$8 + 50 + 100 + \underline{\hspace{2cm}} = 3158$$

$$9 + \underline{\hspace{2cm}} + 700 + \underline{\hspace{2cm}} = 1739$$

$$0 + 0 + \underline{\hspace{2cm}} + 200 = 3200$$

$$500 + 1000 + 2 + \underline{\hspace{2cm}} = 1552$$
