

## 5 Reasons To Install

# A Window Deflector

A window deflector drives away the wind, dirt, snow, and rain, helping you breathe fresh air even in bad weather.

Window deflectors minimize the in-cabin noise and air turbulence.

Fogging is a common problem while driving a car in bad weather; deflectors reduce the mist and keep the windows clear.

They give your vehicle a customized look.

The deflectors also keep the car interiors cool when parked.
