

Tips To Choose The Right **Sunglasses** For Light-Sensitive Eyes

UVA + UVB

Sunglasses should block 100% of the UVA and UVB rays.

Polarized lenses are essential to reduce glare from reflective surfaces, making driving and other activities easy and distraction-free.

Wraparound frames offer extra coverage near the temples. They prevent sun rays from entering the eyes from both sides.

Consult your ophthalmologist to ensure the sunglasses are suited to your requirements.

Not all dark-tinted sunglasses ensure sun protection. Thus, confirm that the lenses are suitable for your needs.
