

# POINTS TO REMEMBER WHEN SELECTING PRINTERS FOR HEAT TRANSFER PAPER

Choose a laser or inkjet printer depending on your frequency of usage.

Choose an inkjet printer compatible with pigment-based inks, as they are anti-fade and easy to use.

Make sure to choose the right toner for your laser printer.

Choose printers that come with pre-installed CISS (Continuous Ink Supply System).

Select a printer with enough pages per minute (ppm) or copies per minute (cpm) rate.

Look for a printer with an SD, MMC, or MS Duo card slot to print images without connecting to a computer or other devices.

Opt for printers with Wi-Fi connectivity to operate directly from phones or tablets.

Consider looking for printers that can be operated with apps for easy usability.
