

++ Facts About Acanthosis Nigricans In Children ++

Obesity is the main reason for acanthosis nigricans in children.

Some cases cannot be cured with topical creams and lotions and require treatment for underlying conditions.

The probability of having insulin resistance in acanthosis nigricans may vary depending on the skin phenotype.

The sudden onset of dark skin without obesity could be linked to serious conditions.

Hereditary acanthosis nigricans progresses until puberty and regresses or stabilizes afterward.
