

Tips For Selecting

The Best Lawn Mower Blades

The width of the blade can be from two to three inches, not too wide or small.

The length can range from 16 to 22 inches, depending on your lawn mower.

Prefer buying a blade with five to six holes for a firm grip, but do check your mower for the attachment bolt size.

Thoroughly check your mower's deck size when deciding on the blade size.

Try replacing the mower's blade with one that has a similar shape to the original blade.

The number of blades needed may be single or double, depending on your lawn mower.

Buy a good quality blade for long-lasting use, preferably stainless steel.

If available, look for anti-rust models.
