Stepwise Guide On Applying Eye Primer On Oily Eyelids

Start with a clean, dry face, and make sure your eyelids are clean and free of makeup or oil.

Dispense a small amount of eye primer onto the back of your hand.

Using your fingertip, dab the primer onto your eyelids, starting at the inner corner and working your way outwards.

Gently blend the primer into your skin, covering the entire eyelid area.

Let the primer dry for a minute or two before applying your eye makeup.

Once the primer is dry, you can apply your eyeshadow, liner, and mascara as desired. The primer will help your eye makeup stay in place and prevent it from creasing or smudging.

Remember to use a small amount of primer, as a little goes a long way. If you use too much, your eye makeup may appear cakey or heavy.
