

STEP-BY-STEP Method For Making Fragrance Oil For Candles

Choose the essential oils you want to blend.

Take a drop of each oil and add it to a small jar. Use a fresh dropper for each oil.

Leave it aside for some time to get a whiff of the fragrance.

Make notes of oils you blended, concentrations, and the feel of the fragrance.

Cover the jar and let the fragrance mature in a dark place.

Open the lid and smell the fragrance again. Make notes.

Make necessary corrections, try different combinations, and repeat.

Mix it in the melted wax at the appropriate temperature.

Pour the wax into the candle mold and let it solidify.
