

Steps For Applying **HARD WAX** At Home

Cleanse the hair-removing area to remove dirt, oil, or lotions.

Apply pre-wax oil as a protective barrier between the skin and the wax.

Heat the hard wax using a wax warmer or microwave and stir well to avoid lumps.

Apply the wax onto the skin gently in the same direction as the hair growth using a stick or spatula.

At the end of the skin, give a lift or lip to hold on to when taking off the wax.

Wait for the wax to harden.

Peel off the wax in the opposite direction of hair growth by holding on to the lip and applying some force.

After waxing, apply soothing gel or in-grown serum. Repeat the process for all desired areas.
