

Safe Ways To Give Levothyroxine For The Treatment Of Hypothyroidism In Babies

Double-check the strength and concentration of the liquid or tablet as per the prescription.

Crush and mix the tablet or dissolve the liquid with clean drinking water, breast milk, or formula.

Mix and dissolve the tablet or liquid in water and serve in a sippy cup for older babies and toddlers.

Administer the exact prescribed dose at the same time every day.

Check and monitor the treatment prognosis through a periodic blood test assessing T4 levels.
