

Ways To Ignite Your Child's Interest In Science

Use the child's curious questions as opportunities to discuss scientific concepts.

Explore the answers by conducting simple home experiments with the child.

Encourage the child to share their explanations and observations of a phenomenon.

Go outdoors and let the child safely explore plants, animals, and the weather.

Encourage hands-on learning with at-home projects.

Let the child engage in gardening to learn about cause and effect.

Let the child assist you while cooking to help them learn about measurements.

Let the child fill water bottles of various sizes to learn about volume.
