

Tips For Using A *Solar Lantern* Efficiently

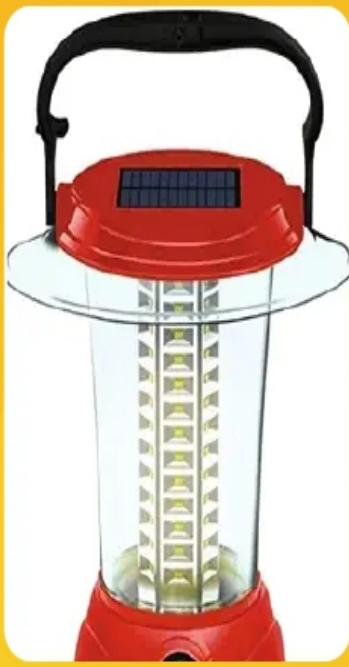

Read the usage instructions provided by the manufacturer upon arrival.

Remove the protective film from the solar panel before using it.

Place the lantern in direct sunlight for 48 hours to fully recharge it before its initial use.

Ensure the lantern is not obstructed by shadows or shade during the charging process.

Avoid placing the lantern on dark surfaces while recharging to prevent overheating.

Plan the charging schedule according to the weather conditions.

Keep the solar panel clean at all times for efficient recharging.

Install the lantern away from artificial lighting when using it since the lantern functions best in complete darkness.
