

Steps For Applying CAR SCRATCH REMOVER

Wash, clean, and dry your car properly.

Remove any dirt from the scratched area.

Apply the remover compound or pen over the scratch using even circular motions.

If using the polishing compound, take the recommended amount in a pad or cloth given in the kit.

Buff the area using a buffer in a back-and-forth motion until the scratch becomes invisible.

Use a clean and soft towel to wipe the surface for any excess compound.

Wash the area with a soft towel and clean water.

Wax the area after a few days to seal the paint.
