

Steps For Using A *Fabric Protector Spray* On Upholstery

Clean the sofa with an appropriate fabric upholstery cleaner or steam clean it.

Open all the windows and doors of the room to ensure ample ventilation.

Spread a ground tarp under the sofa to safeguard your floor from spray stains.

Cover objects in close proximity to the sofa and the non-fabric parts of the sofa.

Grab the fabric protector spray and shake it well to activate its formulation.

Spray on a small hidden spot of the upholstery and wipe it to test for colorfastness.

If the spray passes the patch test, coat the entire upholstery with the spray.

Hold the spray bottle six inches away from the upholstery and use steady sweeping motions.

Allow it to air dry thoroughly and follow it up with another light coat of the spray.
