

Benefits Of Long-Term Treatment In Pediatric Stroke

Physical Therapy

Focuses on gross motor skills by strengthening muscles and balancing movements.

Occupational Therapy

Focuses on fine motor skills by learning and repeating activities such as using a pen.

Speech Therapy

Focuses on speech development, eating, and swallowing.

Educational Therapy

Assists in continuing school education.

Vision Therapy

Helps to enhance vision if there is a change.

Aquatic Therapy

Helps the child to become aware of body posture and movements by training in water.
