

How To Use A Formula Prep Machine?

Fill the purified water in the water tank as per the measurements.

Load the formula powder into the container.

Adjust the height of the bottle holder tray.

Place the bottle on the tray.

Select the bottle ounces or the milk required by pressing the one-touch buttons.

Press the start button to begin the process of mixing.

The machine will dispatch the formula into the bottle.

Check the temperature of the formula and feed your little one.
