

# Factors To Consider When Buying A Car Seat Toy

## Projectile risk:

Loosely connected parts of the car seat toy may become projectiles and impose risk in case of an accident or sudden movements.

## Number of parts:

A toy with many parts may distract the person driving the car. So opt for toys with minimal parts for easy use.

## Safety:

Choose toys that meet international safety standards and are free of sharp edges.

## Storage:

Look for toys that are easy to store in a diaper bag or container to avoid misplacing them or a projectile risk.

## Material:

Choose toys made of durable material for wear resistance. However, ensure they are free of BPA and toxins.

## Choking hazard:

Consider the manufacturer's age recommendation, as tiny parts may cause a choking hazard.
