

# Vital Facts About Pollution For Children

The underdeveloped immune system of children makes them more susceptible to pollution than adults.

The world's oceans get about 6.5 million tonnes of trash every year.

The decomposition of plastic might take 450 to 1000 years.

Water pollution kills about 100 million mammals and 1 million seabirds every year.

40% of plastic for packaging items is used just once and discarded.

After blood pressure, food risks, and smoking, air pollution is the fourth major cause of health risks.
