

HOW TO DEAL WITH YOUR CHILD'S POTTY TRAINING PROBLEMS

Problem

Child avoiding the toilet

Solution

Use rewards to motivate them. Give potty training a break for a month and try again.

Problem

Child not sitting on the potty

Solution

Encourage them by giving them some books to read. Do not make them sit on the potty for more than a few minutes. Praise them for attempting.

Problem

Child wetting themselves

Solution

Either start putting on the diaper again or try potty training after a few weeks. Do not stop and start the training too often, as it may confuse the child.

Problem

Child using the potty sometimes and having accidents at other times

Solution

In the beginning, accidents might happen. Do not worry or be upset. Praise your child when they manage to stay dry. During accidents, gently remind them to use the toilet.

Problem

Child been potty trained for a while but started wetting themselves again

Solution

Your child may have some underlying problems. Speak to your child to determine it. See a doctor for confirmation.
