

How TATTOOS — CAN AFFECT — YOUR SKIN?

SKIN INFECTIONS

Might occur immediately or a few days after getting inked

SWELLING OF LYMPH NODES

May happen when the skin is healing from the tattoo

RASH

Immediately after or three weeks after getting a tattoo

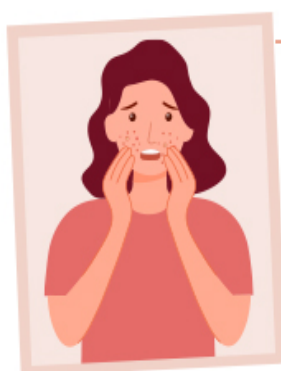

MRI BURN

Some might feel a burning sensation on tattooed skin during an MRI scan

ALLERGY NEAR THE INKED SPOT

Might occur every time the tattooed spot is exposed to the sun

SKIN DISEASES

Sometimes, psoriasis, eczema, or other skin diseases may be triggered by tattoos 10 to 20 days after getting inked

Note: Although these infections may occur near the inked region, the infections can reach the bloodstream. Confirm with your doctor if you can nurse a baby during such infections.
