

Points To Remember

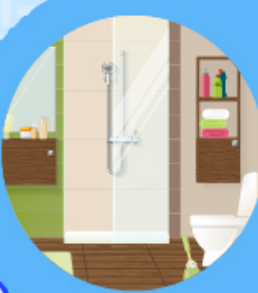

When Buying

A New Shower Faucet System

The shower lever should be adjustable as per your preferences, such as hot, cold, or lukewarm water.

Choose the material and color that best suits your bathroom, or buy basic stainless steel or chrome-finished ones.

Consider the water flow rate you wish to have and the one that works with your plumbing.

Prefer choosing faucets with air injection technology to save water.

Opt for a single-handle shower faucet, traditional two-tap mixer, or customizable shower system with multiple handles as per your comfort.

Choose the one that is easy to install and requires minimal modifications in your bathroom's plumbing.
