

Precautions For Using Hair Gels On Your Child

Choose hair gels that are free of harmful chemicals.

Look for the ones with natural ingredients, like jojoba and olive oil.

Make sure the product is dermatologically tested.

Initially, apply the gel on your child's forearm and wait for 24 hours.

Apply the appropriate gel (whether with strong, medium, or low hold) depending on the hairstyle.

Start with a small amount of product and add more if needed.

Avoid using heat styling products after applying the hair gel.

Make sure to wash your child's hair thoroughly after the use.
