

# Applying Kajal On A Baby's Eyes

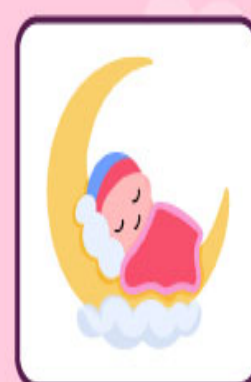

## Reasons Why People Use It For A Baby's Eyes

Kajal is sometimes applied to a baby's eye for ceremonial purposes or to ward off the evil eye.

Some believe kajal can make babies' eyes brighter, bigger, and longer.

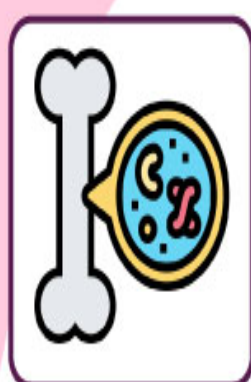

Another belief is that kajal has a soothing effect on a baby's vision and helps them sleep better.

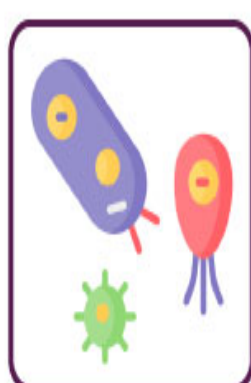

## Reasons To Avoid It

The use of commercial kajal can increase the risk of lead poisoning.

The prolonged use of kajal can lead to increased lead levels in the body, potentially leading to brain and bone marrow damage.

Poor hygiene while applying kajal can expose the baby to pathogens.
